Project Summary

1,000–2,000 CHARACTERS · SOCIAL & ENVIRONMENTAL CONTEXT

The Problem: In Jordan and across the Arab world, chronic lifestyle diseases — obesity, type 2 diabetes, hypertension — are rising sharply. Professional personal coaching costs \$30–\$80 per session; most families cannot sustain this. The result: millions of people receive no structured health guidance whatsoever.

AiFitCoach is an AI-powered fitness and nutrition coaching platform built to change this. It delivers fully personalized, evidence-based coaching through an intelligent conversational AI — available 24 hours a day, 7 days a week, on any device, in both **Arabic and English**, at a fraction of the cost of a human coach.

This is not a simple chatbot. AiFitCoach is a **multi-agent AI system** that learns each user's profile, builds adaptive workout and nutrition plans, tracks progress over time, and processes uploaded photos, meal images, and PDF health reports to incorporate real user data into its coaching. A built-in memory system ensures every interaction improves on the last.

The platform is already **fully built and production-ready** — deployed on cloud infrastructure, accessible from any browser, with no installation required. It combines a modern React web application with a sophisticated Python AI backend, RAG (Retrieval-Augmented Generation) over real fitness datasets, and a safety moderation layer.

By removing the financial and language barriers to quality health coaching, AiFitCoach directly addresses the lifestyle disease epidemic — one of the most urgent public health challenges in Jordan and the broader MENA region.

2

Market Analysis

SEGMENTATION · SWOT · COMPETITION · PARTNERS

SEGMENT	PROFILE	SIZE ESTIMATE
Primary	Adults 18–45 in Jordan & MENA seeking affordable fitness/nutrition guidance	~80M people
Secondary	Women needing private, Arabic-language coaching with cultural sensitivity	~40M women
Tertiary	Corporate wellness programs & health insurance providers	High value / B2B

Market Size: The global digital fitness market exceeded \$50 billion in 2025, growing at 26% CAGR. The Arab world — 450 million people — is vastly underserved by Arabic-language health technology. Less than 5% of the MENA population currently uses any digital fitness coaching.

STRENGTHS

- Production-ready, fully built product
- Full Arabic + English bilingual support
- Multi-agent AI with memory, RAG, vision
- Very low operational cost per user

WEAKNESSES

- Early-stage brand recognition
- LLM API costs scale with users
- No native mobile app yet (web only)

OPPORTUNITIES

- Massive underserved Arabic-speaking market
- Growing government health initiatives in Jordan
- Corporate wellness demand post-COVID
- First-mover advantage in Arabic AI coaching

THREATS

- Global competitors (MyFitnessPal, Noom)
- User trust in AI health advice
- Data privacy regulation changes

Competitive Landscape: Existing players (MyFitnessPal, Noom, Freeletics) are English-first, offer no deep Arabic support, and lack genuine AI personalization. AiFitCoach's multi-agent architecture and Arabic-first design is a clear and defensible differentiator in this region.

PARTNER TYPE	PARTNER	ROLE
Cloud Infrastructure	Render / Railway	Backend and frontend deployment
AI Engine	OpenAI / Groq / Ollama	LLM inference (flexible stack)

PARTNER TYPE	PARTNER	ROLE
Database & Auth	Supabase	User data, authentication, storage

Market Opportunity

RELEVANCE · REAL NEED · TIMING

Lifestyle-related chronic diseases cost Jordan's healthcare system hundreds of millions of dollars annually. The WHO reports that physical inactivity is one of the top 10 leading risk factors for global mortality. Yet behavior change through coaching has proven highly effective — structured coaching reduces obesity rates by **30–50% over 12 months**.

The gap is clear: there is no affordable, intelligent, Arabic-speaking fitness coach on the market. Every existing solution is either too expensive (human coaches), too generic (basic apps), or inaccessible to Arabic speakers. AiFitCoach fills this gap precisely.

Why now? Smartphone penetration in Jordan exceeds 90%. Internet access is widespread and affordable. AI adoption is accelerating globally. The regulatory environment for digital health services is open. A first-mover advantage in Arabic AI health coaching in Jordan and MENA is achievable today.

AiFitCoach is uniquely positioned to capture this opportunity by combining technical depth (multi-agent AI, RAG, vision) with cultural relevance (Arabic language, halal nutrition, Ramadan-aware plans) and radical affordability (target: under \$5/month).

Product & Service Presentation

FEATURES · TECHNOLOGY · INNOVATION · VALUE

AI Chat Coach
Conversational coaching via GPT-4-class LLMs with domain routing and content moderation.

Workout Planner Agent
Generates adaptive multi-week workout programs tailored to user level, goals, and equipment.

Nutrition Planner Agent
Creates personalized meal plans with calorie/macro targets; culturally aware of halal and MENA diets.

Progress Analyzer
Tracks user metrics over time, detects plateaus, and automatically adjusts recommendations.

Attachment Intelligence
Users upload meal photos, PDF lab reports, or body scans — AI reads, interprets, and coaches from them using OCR and computer vision.

Memory System
Short-term (conversation) and long-term (user profile, goals, history) memory for truly personalized coaching that improves over time.

Multilingual (AR/EN)
Full Arabic and English support with auto-detection. Culturally sensitive responses for MENA users.

RAG Evidence Engine
Retrieval-Augmented Generation over real fitness/nutrition datasets ensures evidence-based, accurate answers — not hallucinations.

LAYER	TECHNOLOGY
Frontend	React 18 + Vite + TailwindCSS
Backend	Python FastAPI
AI / Agents	Multi-agent LLM system (OpenAI / Groq / Ollama)
Database	Supabase (PostgreSQL + Authentication)
Deployment	Docker, Render, Railway (cloud-ready)
Vision / OCR	PIL, RapidOCR, LLM vision analysis

Innovation: The combination of multi-agent AI, persistent user memory, document vision/OCR, and Arabic-language support in a single coherent coaching platform has no direct equivalent in the MENA market. AiFitCoach brings enterprise-grade AI architecture to a consumer health application.

Value for users: Save \$200–\$500/month vs. a human personal trainer. Access coaching at 2 AM, during Ramadan, while traveling. Receive advice grounded in actual uploaded health data

— not generic templates.

Management Team

KEY MEMBERS · SKILLS · ROLES

Abu Ayyash

Founder & Lead Developer

Full-stack development (React, Python, FastAPI) · AI/ML system integration · Multi-agent architecture design · RAG pipeline engineering · Cloud deployment (Docker, Render, Railway) · Database design (Supabase/PostgreSQL) · Product strategy & vision

The founder designed and built the entire AiFitCoach platform end-to-end: frontend UI, AI backend, multi-agent system, RAG pipeline, database schema, cloud deployment infrastructure, and all seven AI agents. This demonstrates full technical ownership and entrepreneurial execution capability.

The team is actively seeking co-founders with expertise in business development, marketing, and health sciences to scale the venture following the competition.

3-Year Financial Forecast

BUSINESS PLAN · REVENUE · COSTS · USE OF FUNDS

Revenue Model: Freemium SaaS subscription.

TIER	PRICE	INCLUDES
Free	\$0/month	20 AI messages/day, basic workout and nutrition plans
Pro	\$4.99/month	Unlimited coaching, full memory, file uploads, progress tracking
Corporate/Team	\$99/month	Up to 25 employees, admin dashboard, usage reporting

3-Year Revenue Projections

YEAR 1

\$12,000

~200 Pro users

Launch Jordan · Validate product-market fit

YEAR 2

Public Health Impact: AiFitCoach directly addresses the epidemic of lifestyle-related chronic disease in Jordan and the Arab world. By making evidence-based fitness and nutrition coaching affordable and accessible, the platform can measurably reduce rates of obesity, type 2 diabetes, and cardiovascular disease in its user base.

Women's Empowerment: In many MENA communities, women face cultural and practical barriers to accessing fitness facilities or hiring male coaches. AiFitCoach provides a private, safe, Arabic-language coaching environment — enabling thousands of women to improve their health independently. This directly aligns with the Orange SVP's gender equity objectives.

Financial Inclusion: At \$4.99/month versus \$200+/month for human coaching, AiFitCoach makes professional-level health guidance accessible to middle and lower-income households for the first time. A free tier ensures even financially constrained users receive basic guidance — health as a right, not a luxury.

Digital Inclusion: The platform operates in a browser on any device, including low-end smartphones, with no app installation required. Arabic-first design ensures accessibility for users with limited English literacy.

Environmental Footprint: As a fully digital service with no physical infrastructure, AiFitCoach has a minimal carbon footprint. Cloud hosting on energy-efficient modern data centers further reduces environmental impact compared to traditional gym or clinic operations.

Mission in one sentence: AiFitCoach exists to make expert, personalized health coaching accessible to every person — regardless of income, language, location, or gender.
